

BREEZY ONE OPERATION INSTRUCTIONS

STEP 1 Enter your security code.

Make sure the tanks have enough disinfectant and that the battery is charged. Do not run Breezy if the battery is below 20%.

STEP 2 Clear the path for the robot.

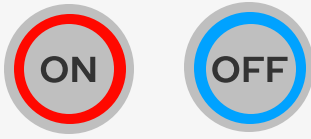

Be sure there are no people in the area when fogging. Leave doors open to allow Breezy to get through, and move any furniture that may be in the way.

STEP 3 Choose the route.

Use the screen to select the route that you want to run. The robot will move to its starting point.

STEP 4 Activate the fogger.

Press the button below the screen to activate the fogger. It will be red when the fogger is activated and blue when deactivated.

STEP 5 Start fogging.

START FOGGING

Press the "Start fogging" button on the screen.

STEP 6 Deactivate the fogger.

Once the route is finished, deactivate the fogger. You can send it on another route, or back to the dock.

When not in use, the robot should be docked. The lightning bolt near the bottom of the robot will blink green to indicate that it is charging.

You can press the red button on top of the robot to immediately stop it from moving/fogging. You can carefully push the robot when stopped. To deactivate the stop button, turn it clockwise. Do not try to dock the robot by pushing it.
